NSF Award ICER 2126510

CONTRIBUTOR

Science

Companion books to promote published work and standalone thought experiments.

- Supplement a publication with reader-friendly, executable, citeable explanations
- Document robustness checks, side analyses, and "best practices" without bloating the method section
- Satisfy journal code and data accessibility requirements

Software & Data

Tech stack notebooks that extend normal documentation into practice

- Spotlight a package or pipeline via deep, worked case studies alongside
- Explain how multiple niche packages can be used together in pipelines
- Give potential users an entry point for adopting your package outside of product documentation

EDU

Didactic notebooks that double as labs, teaching modules, and portfolio pieces.

- Turn hard-won tricks and mental checklists into step-by-step workflows
- Make teaching materials available to students and colleagues
- Build an educational portfolio that shows how you teach and how you approach methods.

READER

- Follow the workflow from raw data to published figures.
- See, rather than infer, how each methodological choice is implemented.
- Access scripts and notebooks used in a publication and try the original logic on your own data.

- Evaluate task-specific tools being developed by the community
- Learn idiomatic usage of packages (e.g., how people structure `Xarray` workflows, call `geoChronR`, or use `Pyleoclim`) by reading real notebooks with commentary.

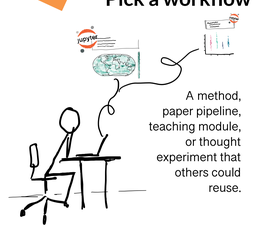
- See full, worked examples of common but nontrivial tasks.
- Learn how to construct standard figures and diagnostics from scratch.
- Explore existing methodologies applied in new contexts.

Start from the PaleoBook template

Clone the template PaleoBook and follow the contributor guide to lay out your chapters, code, and figures.

PALEO TEMPLATE

Pick a workflow to share



A method, paper pipeline, teaching module, or thought experiment that others could reuse.

Publish your JupyterBook

Build the JupyterBook and publish it from your own repository, for example using GitHub Pages.

You keep ownership and control.

Make it citeable

Connect your repository to Zenodo (or a similar service) and make a tagged release to obtain a DOI.

Polish for the PaleoBooks Gallery

Add thumbnails, short names, and tags to make your book and its chapters stand out in the Gallery

Submit your book

Submit an issue via GitHub so we can add your book to the Gallery!

PALEO BOOKS

Track

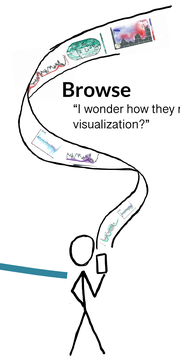
"Interesting paper… but how did they setup their analysis pipeline?"

Learn

"Let's see now, how is `ctn` used in the wild?"

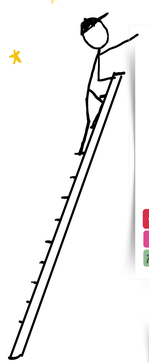
Browse

"I wonder how they made that visualization?"



Try • Cite • Share

Clone the repo and give the code a try!
Cite your inspiration
Share your experimentation



PaleoBooks Gallery

`https://linked.earth/PaleoBooks/`

A browsable, filterable, centralized index of books and individual chapters that bridge paleoclimate observations and models.
